DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 35,36,40-45,47-48,55-59 rejected under 35 U.S.C. 102(e) as being anticipated by Shendon et al.-5,775,983.

Shendon discloses conditioning a glazed polishing pad with a conditioner having coaxially aligned roller segments (102,104) having a knurled surface of different heights and applied at different pressures for various conditioning of pad (col. 5, lines 20, 25, col. 6, line 65), wherein the roller segments rotate at various speeds (col. 7, line 24), the tool (100) being movable transversely to pad via (512), wherein said pad (603) is moved relative to roller segments (col. 4, line 7), and wherein a roller can be non-cylindrical (716). The conditioning device is adjustable, such as by making different patterns and using different forces to embed pattern. This conditioning operation is directly related to the surface characteristics of the workpiece. Col. 1, lines 15-56 state, that the condition of the pad effects the uniformity and material removal rate of the workpiece. When the rate decreases and uniformity is not accurate, the pad must be conditioned.

Application/Control Number: 10/718,587

Art Unit: 3723

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 37 and 38 rejected under 35 U.S.C. 103(a) as being unpatentable over Shendon, alone.

Shendon discloses the claimed invention, as stated above, but does not disclose the particulars of the driving arrangement of the rollers. However, to have a drive shaft with gears to rotate a roller would have been an obvious design choice since this configuration is old and well-known in the art and would be within the level of ordinary skill.

Claims 39, 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shendon in view of Labunsky et al.-6,086,460.

Shendon discloses the claimed invention, as stated above, but does not disclose the rollers moving longitudinal with respect to a polishing web nor being driven electrically. However, Labunsky teaches conditioning a polishing web with a cylindrical roller that is driven by a motor and capable of longitudinal movement (Summary). Therefore, it would have been obvious at time invention was made to one of ordinary skill in the art to provide the conditioner of Shendon with longitudinal movement to be able to be used on a polishing web and to condition all areas of pad, as taught by

Art Unit: 3723

Labunsky, and to provide the rollers of Shendon with motors, as taught by Labunsky, in order to precisely control speed of rollers for more accurate conditioning.

Response to Arguments

Applicant's arguments filed 5-15-06 have been fully considered but they are not persuasive. On pages 6-7, Applicant alleges that Shendon does not disclose 'moving the glazed polishing surface relative to roller segments at a predetermined rate.'

However, it is very clear from the specification of Shendon that the rollers rotate and move (via 512) relative to glazed pad and for moving glazed pad relative to rollers. Col. 6 discusses this matter at line 48, which states the 'pad is rotated' and shown in Figure 1 by arrow. Applicant also stats that the conditioner is not adjustable relative to workpiece surface measurements. However, it is inherent to condition a pad when the polishing is producing inadequate results on a workpiece due to glazing and furthermore the conditioner is adjustable by being used for one revolution of pad or by being used for several rotations of pad dependent on many variables such as pad non-uniformity. The conditioner may also be adjusted with different pressures and patterns (claim 55 limitation) to be embedded in pad to achieve different results on the pad and thus on the workpiece. (col 6, line56-col. 7, line 4).

On page 8, in response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does

Art Unit: 3723

not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eileen P. Morgan whose telephone number is 571.272.4488. The examiner can normally be reached on Monday-Thursday, 7am-3:30pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Hail can be reached on 571.272.4485. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
